

CAM350
HD 3.7mm Board Lens
38mm x 35.5mm

HD Covert Module with OSD for Mirror, Privacy Masking & Video Motion Detect functions.

The NiteDevil HD covert camera module has on screen display for mirror, privacy & motion detect functions. The light sensitivity of the NiteDevil is so good that it can retain a colour picture in very low light conditions making it ideal for dark and low light applications, and its small size is perfect for covert operations. *(includes a FREE fixing bracket)*

Useful Lens TIPS

In order to pick the right lens for the right location, it is useful to understand the main differences in CCTV lenses.

- Fixed Iris Lens - the lens can not be adjusted to alter the amount of light that it lets through to the camera.
- Manual Iris Lens - by manually adjusting the "Iris Ring" on the lens, you can alter the amount of light that is let through to the camera.
- Auto Iris Lens - the lens and the camera work together to continuously and automatically optimise the amount of light allowed through to the camera by controlling the lens' iris using a small electric motor built into the lens. Auto iris lenses come in 2 types:- video and direct drive.

For more information on Video Drive Lenses, Direct Drive Lenses, Which lenses should be fitted externally? Which lenses should be fitted internally? Electronic Iris and Angles of View, see our online tip 138.
